

proVision™

Advanced proVision Application Integration Course

This course will train users to further expand their proVision solution by adding additional applications and achieving increased automation from proVision. Participants in the 3-day lecture-lab Advanced proVision Application Integration course will:

- gain hands on experience adding new applications to proVision
- develop a custom request page and automate it with pre-fill and validation scripts
- use the BridgeBuilder for proVision tool to create application integrations
- augment BridgeBuilder scripts with custom actions to handle more complex application workflows
- configure and deploy Automated Provisioning
- collaborate with experienced integration engineers to review their target applications and plan their integration

Course Prerequisites

- Experience with Java, XML, JScript, Microsoft SQL Server database administration
- Identification and access to candidate applications for automation
- Completion of initial proVision implementation
- Access to a proVision test environment including a proVision server, development workstations and test database

Advanced proVision Application Integration Course Agenda

Day 1	Day 2	Day 3
<ul style="list-style-type: none"> • Introduction • proVision Overview • Case Study: Active Directory • Lab: Create the request web page • Case Study: Preprocessing a provisioning request • Lab: Pre-fill a request screen with values from an external datasource (AD/SQL Server database) 	<ul style="list-style-type: none"> • Case Study: Postprocessing a provisioning request • Lab: Validate values submitted within a provisioning request • Case Study: Automating the provisioning request with a proVision Bridge • Lab: Develop a proVision Bridge with BridgeBuilder • Case Study: SPF framework 	<ul style="list-style-type: none"> • Lab: Develop a custom action • Case Study: Automated Provisioning • Lab: Configure Automated Provisioning • Lab: Customer applications
